Patrolled edits are a feature which allows specific users to mark items in recent changes as having been "patrolled" or "approved". By default this is only available if you have [sysop permissions](#).

This feature is useful when reviewing recent changes for undesirable edits, link spam and vandalism. This allows people (with permission to do so) to coordinate their patrolling activity, such that edits get checked over once, with less wasted effort (different people checking the same edit).

Marking edits as patrolled

To mark an edit as patrolled

1. Access [Special:Recentchanges](#)
Changes which are not patrolled will be indicated with a red exclamation mark
2. Click the diff link next to an edit
3. To mark the edit as patrolled, click the *mark as patrolled* link

Hiding patrolled edits from recent changes

Patrolled edits can be hidden from recent changes by adding "hidepatrolled=1" to url in the following form:

`http://example.com/w/index.php?title=Special:Recentchanges&hidepatrolled=1`

Customization

Enabling/disabling

Patrolled edits are enabled by default. To disable this, set `$wgUseRCPatrol` in `LocalSettings.php` to `false`.

```
$wgUseRCPatrol = false;
```

Permissions

FORwiki

Patrolled edits are enabled for all users. To restrict this to sysops, set **\$wgOnlySysopsCanPatrol** in `LocalSettings.php` to `true`.

```
$wgOnlySysopsCanPatrol = true;
```

Marker

The formatting of the unpatrolled edit marker can be altered using CSS. The exclamation mark displayed on the Recent changes log is styled using the `span.unpatrolled`.
