

This derivative of `{{navbox}}` is yet another attempt to make it simple to produce consistent floating vertical navigation templates.

Usage

```
{{ navbox vertical
| name      = {{subst:PAGENAME}}
| navbar    =
| state     =
| textalign =
| align     =
| width     =
| title     =
| state     =
| list1     =
| list2     =
| list3     =
| list4     =
| list5     =
| list6     =
| list7     =
| list8     =
| list9     =
| list10    =
| below     =
}}
```

Example

```
{{ navbox vertical
| name      = Title
| navbar    =
| state     =
| textalign =
| align     =
| width     =
| title     = Title
| state     = State
| list1     = List1
| list2     = List2
| list3     = List3
| list4     =
| list5     =
| list6     =
| list7     =
| list8     =
| list9     =
| list10    =
| below     =
}}
```

produces

Title

List1

List2

List3
